CALL FOR PAPERS

**International Conference on Environmental Management
and Sustainable Development**

To:

After 30 years of innovation along with regional and international integration, Vietnam has made outstanding achievements in economic development, diplomacy and political stability. However, the country's development is still unsustainable, which creates a need for drawing development policy which can balance the need for economic development with environmental protection and social equity. Therefore, it is necessary to do research on the relationship between economic growth and environmental management. For this reason, Ha Tinh University is holding the international conference on **“Environmental Management and Sustainable Development”**.

1. Objective

The conference aims to provide a forum for academics, authorities and enterprises to share research, experience in resource and environmental management, sustainable economic development. Moreover, this is also the chance for participants to discuss the strategy and solutions to deal with environmental challenges and sustainable development in the context of climate change.

2. Content

The conference will focus on the following main contents:

- Analyse, assess the environmental impacts based on market mechanism: the current economic development of the localities, regions, countries and its impacts on the environment; forecast the consequences of unsustainable development in the future.

- The relationship between sustainable development and environmental protection and management: Awareness and approaches to sustainable development, assessment of sustainable development of localities/regions /nations, the orientation of the management and environmental protection to achieve sustainable development for the economy.

- Experiences in environmental management for the sustainable economic development in the localities, nations and regions...; The impacts of the government policies on sustainable development.

- The relationship between resources, population, economy and environment: Assess and forecast the the level of depletion of resources and its impacts on economic development and environment systems.

- The causes, consequences of climate changes in Vietnam and in the world; Solutions for climate changes; Environmental pollutions and management of environmental pollutions.

- Environmental management from different aspects: the government, enterprise, community....; the responsibilities, duties and rights of parties in environmental management and sustainable development; the collaboration of all concerning parties in environmental management.

3. Language and summary record

Language: English and Vietnamese (Priorities are given to English paper)
